Only 9 days until the Colour Fun Run!

Keep collecting donations!

There is still time to score some awesome incentive prizes.

Do you think you can top our leader board?

Only 9 days until we get covered head-to-toe in bright Holi powder!
Wear your white shirt to make the colours pop!

Frequently Asked Questions

Is the colour powder safe?

Your health is of up-most important. Our colour/holi powder is made of 98% corn starch and 2% permitted colours. Our manufacturer is an ISO 9001-2005 certified Crisil rated company producing the highest quality product. Our powder is not considered hazardous.

Does the powder clean out of clothes?

Although colour powder washes out very easily, we advise you not to wear your best clothes or most expensive shoes. Leather and suede especially are known for easily absorbing colour powder. If you want to keep the colour in your t-shirt, spray with vinegar. However, the colour powder will wash out after several washes.

Will the colour powder wash off your skin and hair?

Yes! The easiest way to get it off is while it's still dry (shake, wiggle or jump up and down). Soap and water, with a little rinse will do the trick. If water is added to the event there is a potential of staining hair, however, it will wash out over time.

What about clean up?

The colour powder is biodegradable and environmentally safe – should it land on your grass it will disappear with a little water. Any colour powder that lands on the pavement can be washed away with a hose or high-pressure water sprayer. It is recommended not to get powder on athletic tracks as the material can be porous leading to staining.

Can we inhale it?

It's a lot like breathing in dust and dirt, extensive exposure is not recommended. People with lung issues such as asthma are advised to be careful in their decision to participate.

What if it gets in my eyes?

We advise that volunteers throw the powder at the torso, however wind and other factors can cause the powder to protrude on the face. Don't be concerned if it does, because the powder is non-toxic and a simple rinse with water will take care of that.

We encourage participants to wear our UV400 rated sunglasses as it will greatly reduce the chances of colour powder getting into the eyes.
